

Industry: AUTOMOTIVE

Client: the largest automotive mirror producer in the world.

TriNET was selected by the client to lead the implementation of a manufacturing and Supply Chain Execution system. We provided total project management, finance, distribution and manufacturing functional consulting, design and implementation. In addition TriNET also did the application and database administration, and turnkey development support for the implementation of the Supply Chain solution. TriNET also led the data conversion and migration effort from multiple legacy systems. TriNET's successful implementation resulted in additional assignments in the areas of EDI interface development between the ERP system and Sterling Commerce software, which involved customizations of DLL's, VB script writing and ActiveX control development. The successful conclusion of these projects has led to an on going "Trusted Partner" relationship between the client and TriNET.
