

# Industry: Healthcare

## Client: premier packager of healthcare solutions

TriNET was asked to co-locate this healthcare organization's critical path applications for Disaster Recovery purposes, due to the critical nature and need to have fail safe availability of a full array of managed care service software applications, and products for their payers and employers. The services and products this client offers contribute to the success of their customers by becoming an electronic extension of their organization and at the same time better controlling the organization's costs and operations by making their suppliers an electronic extension of the organization. Thus it was clearly vital that there was a real-time back up system ready to go, should the primary system(s) fail. TriNET provides a full array of Business Continuity Solutions specifically geared to your business requirements.
